THE GLAS -TECH 9000™ PROCESS

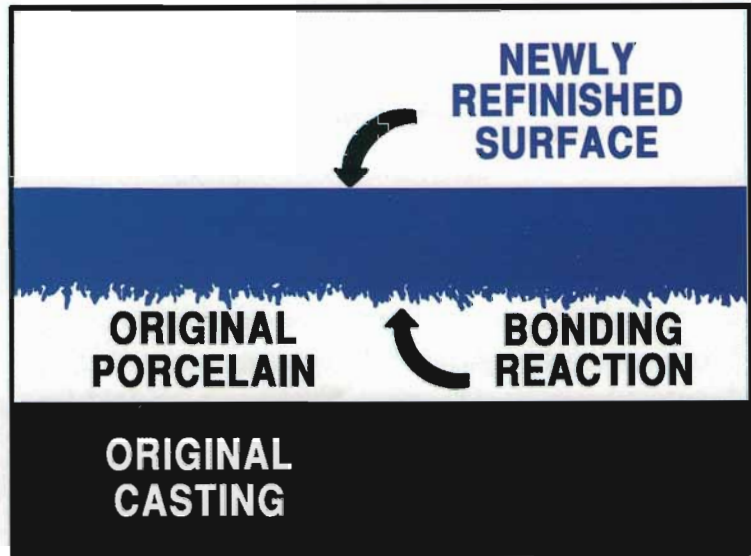

Why

Refinish?

SAVE BIG \$\$\$

Refinishing with *Glas-Tech 9000™* is the most economical and efficient way to revitalize your bathroom, at a mere fraction of the cost of replacement. Fixture replacement involves not only the cost of new fixtures, but also replacing the wall, tile, wallboard, tile floor and subfloor, plus pipes and hardware which are damaged during the removal of the tub. This is very time consuming and expensive!

Using the exclusive *Glas-Tech 9000™* process with your overall remodeling plan you will realize spectacular savings, often as much as 90% over the cost of replacement! This huge savings will allow you to upgrade the quality of other fixtures and accessories.

Many more years of service are gained from bathroom fixtures with the remarkable new tub quality for which there are no substitutes. The durability of this coating provides for long term economic value, making it the most popular choice among hotels, apartment managers, and contractors nationwide. Even bathtub manufacturers use *Glas-Tech 9000™*!

WHY USE GLAS-TECH 9000™

Glas-Tech 9000™ has a proven track record, with over 30 years and 3 million successful applications nationwide. This is the leading and most experienced application process in the field of bathroom and kitchen refinishing. Our technicians are highly trained and take great pride in their work. The result is unequaled performance combined with the best products and techniques available. The *Glas-Tech 9000™* process is the one process that you can trust. Our vast experience and precise application knowledge are unsurpassed. This experience, combined with an extensive quality control system will ensure the most important requirement of all. . . . **Your satisfaction.**

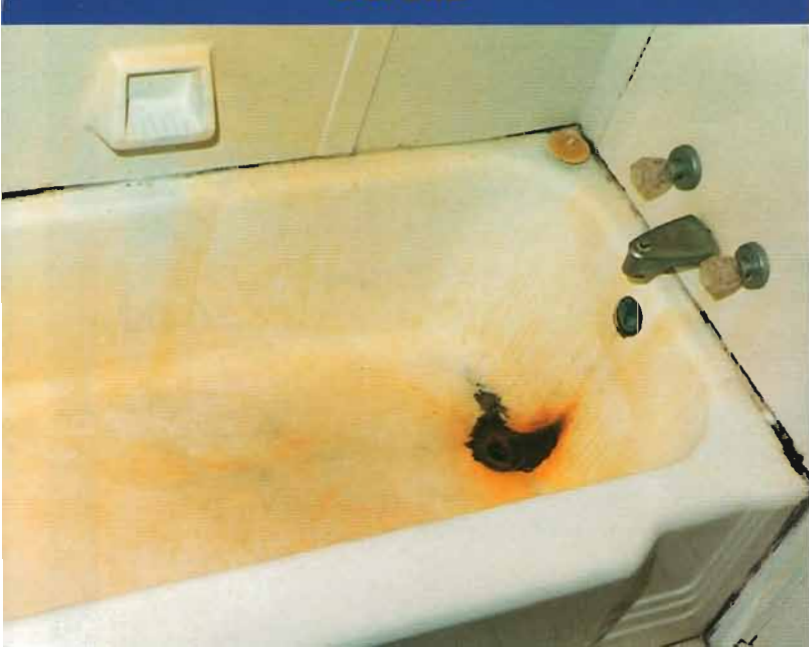

QUICKLY TRANSFORM

Stained, chipped, and hard to keep clean bathroom fixtures are unsightly and unhealthy, and can create a negative impression to your guests. Refinishing your bathroom fixtures with *Glas-Tech 9000™* will give them a smooth, glossy finish within a matter of hours. This non-porous finish actually meets and exceeds the original manufacturer's specifications for stain and acid resistance.

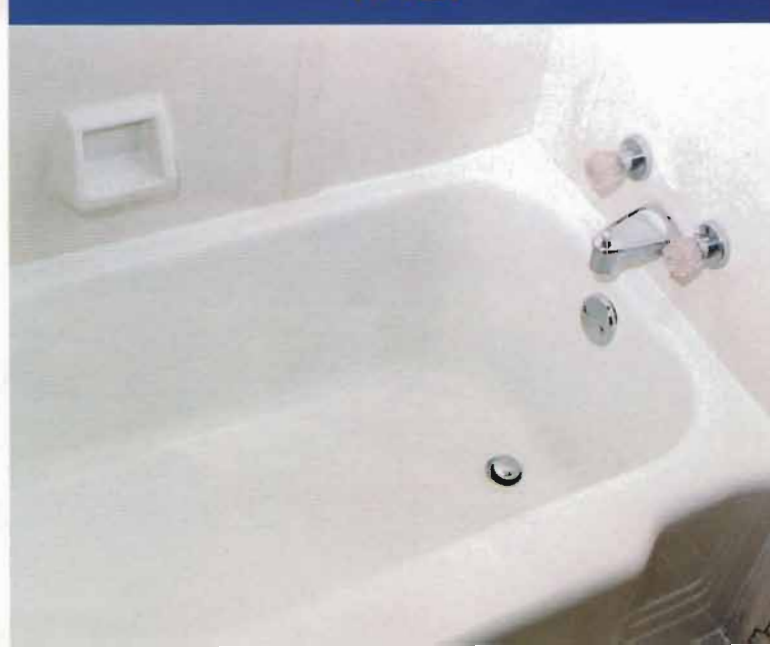

WHAT IS THE GLAS-TECH 9000™ PROCESS?

The *Glas-Tech 9000™* process is a remarkable time tested method that was developed specifically for bathtub and tiled wall finishing. The secret lies in the ability of the compounds to fuse themselves into the original surface through a molecular bonding action. The new finish becomes a permanent part of the existing fixture, unlike bathtub liners, which can crack, trapping unsanitary water and creating a health hazard. With many thousands of successful applications nationwide, the *Glas-Tech 9000™* process is truly bathtub refinishing at its finest.

BEFORE

AFTER

CREATE A SEALED WATERPROOF UNIT

- No More Mold
- No More Mildew
- Regrouting Eliminated
- Eliminate repeated caulking required with tub surrounds

Our preparation techniques, sealants, and compounds all integrate together to form the **Glas-Tech 9000™** System, the leader in tub and tile refinishing technology.

TUB & TILE REFINISHING

Most existing tile areas were not designed for extensive exposure to water. The porous and uneven surface of grout lines allow penetration of moisture which results in unsightly and unsanitary mold, eventually resulting in dry-wall rot.

A FRESH NEW LOOK FOR OLD BATHROOMS

The smooth, non-porous and water resistant properties of **Glas-Tech 9000™** create a permanent barrier to moisture. This turns your tub and tile into one sealed watertight unit - another added benefit of refinishing with **Glas-Tech 9000™**.

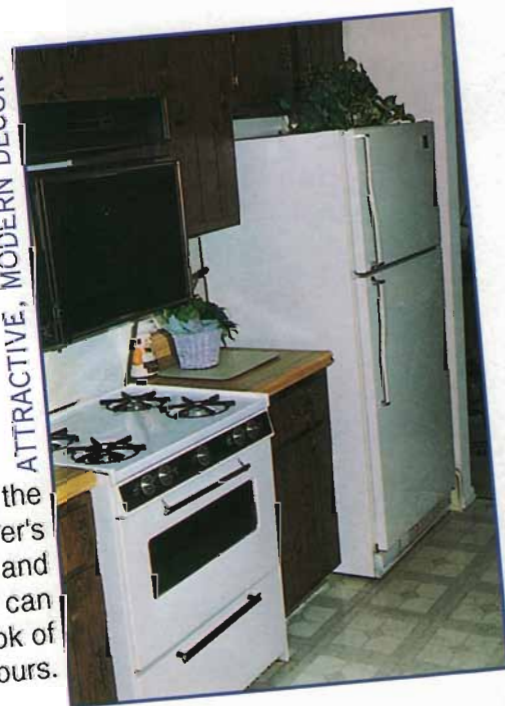

OUT OF DATE COLORS

Existing appliances may work fine, but colors are hopelessly outdated. For far less than the cost of replacement, you can have your appliances professionally refinishing with **Glas-Tech 9000™**. We will quickly and professionally update any type of unit in the color of your choice.

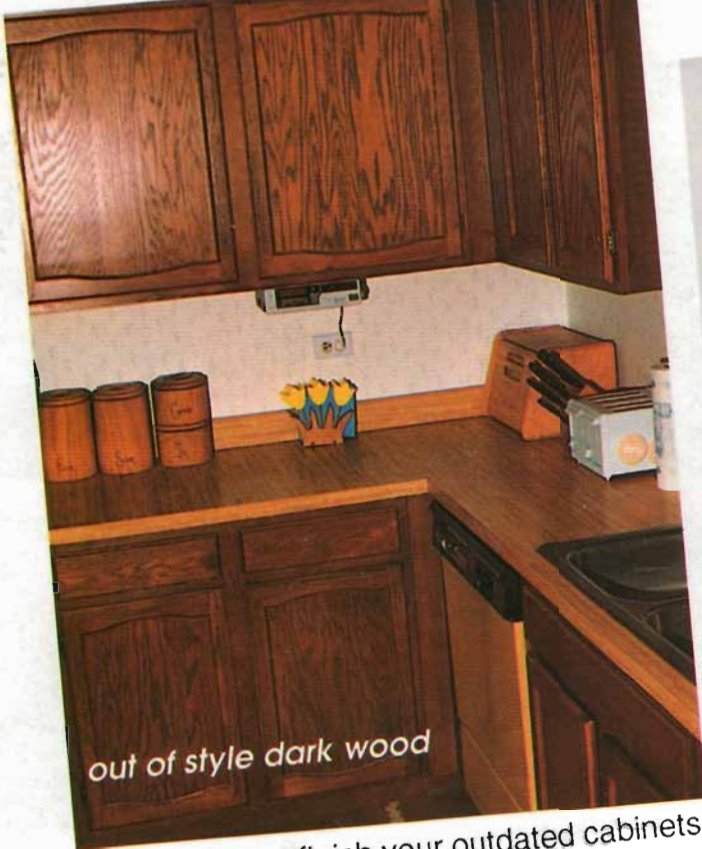

APPLIANCE REFINISHING

ATTRACTIVE, MODERN DECOR

The new finish actually exceeds the original manufacturer's specifications for durability and stain resistance. We can dramatically change the look of your kitchen in a matter of hours.

KITCHEN CABINET REFINISHING

out of style dark wood
